

RRC Bulletin

August 2021 - Issue 117

What's going on in England?

The government's 25 year plans for improving the condition of our water environments are hugely ambitious. Yet efforts to restore 75% of England's rivers, their catchments and coasts to a state of 'close to natural' are responding to that challenge. A greater focus on catchment-scale actions that encourage natural processes to work from soil to sea is critical to this success. Supported by our Water Leaders – representing key partners and stakeholders across the country – the Environment Agency and Natural England are working to embed these principles into our strategies and programmes of restoration. With new and existing partnerships, we are focusing on restoration that has a nature-led approach right at its heart.

Glenn Maas, Judy England, Toni Scarr - Environment Agency

Fixed Point Photography App for monitoring river restoration

Interested in developing a Fixed Point Photography (FPP) application? We are looking for a student to complete the coding and processing of an Android application that will help monitor river restoration schemes and spatial and temporal landscape changes. Get in touch rrc@therrc.co.uk
