SEDIMENT CONTROL

ENVIROLOK®

“Envirolok” is a vegetated mechanically stabilised earth wall system for retaining walls, slope stabilisation, erosion control and shoreline protection. Enhancing natural surroundings and turning unstable soil into a focal point.

RIVER MAT

Greenfix River Mats are suitable for use in natural and artificial channels. Each mat consists of two layers of burlap, with straw & excelsior. RM100 can help with the control of problems caused during civil engineering works such as drainage or flood alleviation.

GEOWEB®

Geocells confine and stabilise soils that would otherwise be unstable. Greenfix offer the world's best cellular confinement system for Bank and Shoreline Protection, Load Support, Channel Protection, Earth Retention, Slope Protection & Tree Root Protection.

SILT CONTROL

Silt and sediment run off from construction sites accounts for 40% of water pollution incidents in the UK. Greenfix offers a number of Silt Management Systems to fit the needs of all sites including, Silt Stop Sediment Control Fence and Silt Curtains.
