

Developing a strategic catchment-wide river restoration plan

7th November 2018

Birmingham

09:30 - 16:00

Strategic catchment planning is essential for delivering successful river restoration and natural flood management projects. However, it is not always a straightforward task and is easy to get wrong. This one-day course will introduce participants to a methodology for developing a catchment-wide restoration plan which will help to identify and diagnose pressures and impacts, develop catchment-wide objectives and prioritise restoration projects. You will learn how to develop a strategic plan as well as learn from where other projects have gone wrong.

Key learning outcomes

- Understand why a strategic catchment plan is essential and how it can help you deliver successful projects.
- Be able to develop a strategic plan for your catchment by following the steps in RRC's methodology.
- Learn how to prioritise projects to help deliver projects which will have the largest impact on your catchment.
- Know where to look for low cost or free information which will form part of your desktop assessment.
- Be introduced to RRC's new Catchment Walkover Survey which can help you identify pressures and impacts.

Cost (incl. VAT)

£200 RRC members; £260 non-members
